## List of Tables

1. Number and percentage distribution of SSI recipients, by age, 1974–2000.....	4
2. Number and percentage distribution of SSI applications received, by age, 1973–99 .....	5
3. Number and percentage distribution of SSI awards, by age, 1973–99 .....	6
4. Number and percentage distribution of SSI applications received and awards for children, by selected characteristics, 1999 .....	7
5. Number of children receiving federally administered SSI payments and average monthly amount, by region and state, June 2000 .....	8
6. Percentage distribution of children receiving federal SSI payments, by monthly amount, June 2000.....	10
7. Number and percentage distribution of children receiving federally administered SSI payments, by selected characteristics, June 2000 .....	11
8. Number and percentage distribution of children receiving federally administered SSI payments, by age and diagnostic group, June 2000 .....	12
9. Number and percentage distribution of children receiving federally administered SSI payments, by sex and diagnostic group, June 2000.....	13
10. Number and percentage distribution of adult recipients who first became eligible for SSI before age 18, by year of first eligibility and age in June 2000.....	14
11. Number and percentage distribution of children receiving federally administered SSI payments, and average amount of child's income, by type of income, June 2000.....	15
12. Number and percentage distribution of children receiving federally administered SSI payments, by number of parents in the household, June 2000 .....	16
13. Number and percentage distribution of children receiving federally administered SSI payments with one parent in the household, by type and monthly amount of parental income, June 2000 .....	17
14. Number and percentage distribution of children receiving federally administered SSI payments with two parents in the household, by type and monthly amount of parental income, June 2000 .....	18
15. Number of children receiving federally administered SSI payments with one or more parents who have income, and average amount of parent's income, by type of income, June 2000 .....	19
16. Number and percentage distribution of children receiving federally administered SSI payments subject to deeming, by factors affecting parental deemed income, June 2000 .....	20

# Summary

---

Effective with the December 1997 report, children are now defined as recipients under age 18. In addition, all average SSI payment amounts shown are based on the amount received in the month of the report, rather than the amount due in the following month. This is to conform to reporting methods used in other SSA publications.

In June 2000, over 850,000 blind and disabled children were receiving SSI payments. They made up 12.9 percent of the over 6.6 million SSI recipients in June. The June data reflect an increase of over 4,000 child recipients since December 1999 (table 1).

To be eligible for SSI payments as a child, an individual must be under age 18, unmarried, and must meet the applicable SSI disability, income, and resource criteria.

The tables present a "snapshot" of selected program and demographic characteristics of children who receive SSI payments. Table 1 is based on universe counts. Tables 2–16 are based on SSI 10-percent sample files. The source record for all of the sample files is the Supplemental Security Record (SSR).

## Applications and Awards

In calendar year 1999, the most recent year for which complete data are available, SSA received over 350,000 SSI applications for children (table 2). This represents 21 percent of the almost 1.7 million SSI applications received during that period.

Almost 140,000 children were awarded SSI payments in calendar year 1999 (table 3). This was over 18 percent of the nearly 760,000 persons awarded SSI in that period.

Historically, the percentages of both applications and awards for children have gradually increased over the years. Both rates rose rapidly in the early-to-mid 1990's, after the Zebley decision. They dropped off somewhat after the Welfare Reform legislation was enacted in 1996, but they now appear to be again representing an increasing share of the overall applications and awards.

## Payments

The average SSI payment to children in June 2000 was \$450 (table 5). This amount includes federally administered state supplementation where applicable, but does not include any retroactive payments.

The states with the largest numbers of children receiving SSI were California, New York, Florida, Texas, Ohio, Pennsylvania, Illinois, Michigan and North Carolina. Together they accounted for 52 percent of all child recipients.

Table 6 shows the number and percentage distribution of the amount of the federal SSI payments to children. Sixty-six percent of the children received \$512 at that time. The \$512 represents the maximum amount of federal SSI payable in 2000 to persons with no countable income.

## Demographic Characteristics

### Age

In June 2000, 15 percent of the children receiving SSI were under 5 years old. The remainder of those children under age 18 was fairly evenly distributed by age (table 7).

### Sex

Child recipients are more likely to be boys than girls, by about three to two (table 7). This is generally the same gender pattern found among adult disabled recipients.

### Living Arrangements

Four out of five of the children lived with their parent(s) (table 7). Another 14 percent were identified as living in their own household for purposes of payment determination. For the most part, these children lived with other relatives, in hospitals, nursing homes, residential schools, foster care, or independently. Less than 2 percent were patients in a medical facility where more than half of the cost of their care is covered by the Medicaid program.

## **Citizenship**

Nearly all (99 percent) of the children were U.S. citizens, either by birth or naturalization (table 7).

## **Diagnosis**

Almost two out of three (62 percent) children were disabled because of a mental disorder, and the largest percentage of this group (34 percent) were mentally retarded (table 8). The only other diagnostic category of any size was diseases of the nervous system and sense organs (12 percent), which included all of the approximately 6,600 blind children on SSI in June 2000. (This distribution is based on the diagnoses of the 94 percent of children for whom a diagnostic code is available on the SSR).

The incidence of mental retardation as a primary diagnosis increased with age, from 3 percent of those under age 3 to 47 percent of those aged 13–17. The same pattern appeared among those children under age 18 with psychiatric disorders.

The only diagnostic category with a significant difference between sexes was other psychiatric disorders, 33 percent of the males versus 19 percent of the females (table 9). There was no substantial variation between sexes in the other diagnostic categories.

## **Young Adult Recipients Who Began As Children**

In addition to the 851,000 recipients who are currently considered as children for program purposes, the SSI rolls in June 2000 included 514,000 adult recipients who first became eligible for SSI payments before age 18 (table 10). Thirty-five percent of these recipients first became eligible during the 1974–80 period, and thus appear to have been receiving SSI for much of their lives.

## **Income**

About one in four (26 percent) children had income in June 2000, and most of these had only unearned income (table 11). The most frequent types of cash unearned income were Social Security benefits (7 percent) or support payments from an absent parent (10 percent). Another 1 percent were receiving income based on need (most frequently from the Temporary Assistance to

Needy Families (TANF) program, formerly known as AFDC), while 7 percent had some type of in-kind income that was considered for SSI purposes. About 74 percent of the children had no income reported on their record.

## **Parents in the Household**

Over three-fifths (62 percent) of the children were living with one parent, and another 25 percent lived with two parents (table 12). For the 14 percent with no parent in the household, deeming of income from a parent to a child recipient does not apply, and information about parents is not part of the SSI record.

### **One-Parent Household**

Of the 62 percent of SSI recipient children who live with only one parent, nearly all (95 percent) lived with their mother (table 13). Only 5 percent lived with their father.

For 38 percent of the children in a one-parent household, that parent had no income (the SSI payment is not considered as income in this analysis). Over one-third of the children (34 percent) lived with a parent who had earned income, while for 32 percent of the children the parent had unearned income. Mother-headed households showed about the same distribution, while father-headed homes were a little more likely to have some income and earnings, and a little less likely to have unearned income.

Even where there was some income in the household, the amounts were small. Thirty-one percent of the children were in homes with under \$200 income in the month of June 2000. Only 51 percent of them had \$600 or more in income that month. Children living with a father were more likely to have higher family incomes.

### **Two-Parent Household**

The 25 percent of SSI children who live with two parents were relatively better off economically than those living with only one parent (table 14). Fourteen percent of the former had no income from parents, compared with 38 percent of those living with one parent. Also, 61 percent of the two-parent households had income of \$1,000 per month or more, compared with 20 percent of the children in one-parent households.

Mothers were less likely to have income if there was another parent in the household than were single parent mothers. Sixty-one percent of mothers in two-parent households had no income, compared with 39 percent of single mothers.

#### **Parental Income**

Almost three-fifths (59 percent) of the children lived in a household where the parent(s) received some type of income, which averaged \$1,013 in June (table 15). About 39 percent of the children had one or both parents with earnings, averaging \$1,379; 26 percent had some type of unearned income, averaging \$258. The most common type of unearned income was public income-maintenance (PIM) payments. This includes TANF payments, Department of Veterans Affairs payments based on need, and other governmental programs.

#### **Parent-to-Child Deeming**

In households where the parent(s) of SSI children receive income, that income must be considered in determining the child's payment amount. This process is called deemming. Certain types of parental income are excluded from deemming.<sup>1</sup> This includes PIM payments and any parental income used to determine the amount of the PIM payments. In addition, allocations and exclusions reduce the amount used in the child's payment computation.

About 68 percent of the children subject to deemming had one or more parents with income in June (table 16). Of these children, deemed income affected the payment of only 26 percent, after all exclusions and allocations were applied. Children living with two parents (34 percent) were more likely to have their payment affected by deemed income than children living with one parent (21 percent).

1995–99 .....	6.8	18.9	1.7	...	...
2000 .....	.1	.2	...	...	...

<sup>1</sup> Those under age 18 in 1974 would be no more than 44 in 2000.

Table 11.—Number and percentage distribution of children receiving federally administered SSI payments, and average amount of child's income, by type of income, June 2000

Type of child's income	Number	Percent	Average amount
Total.....	846,670	100.0	...
With income <sup>1</sup> .....	217,420	25.7	\$196
Earned income only .....	2,440	.3	361
Unearned income only .....	213,680	25.2	191
Both earned and unearned income.....	1,300	.2	665
With unearned income <sup>2</sup> .....	214,980	25.4	192
Social Security .....	62,190	7.3	178
Veterans' .....	'1,640	.2	83
Income based on need.....	7,200	.9	241
Support from absent parents.....	88,010	10.4	181
Interest, dividends, etc .....	13,740	1.6	1
Other .....	4,500	.5	1,079
In-kind income.....	56,880	6.7	132
No earned or unearned income <sup>3</sup> .....	629,250	74.3	...

<sup>1</sup> These amounts do not include income deemed from parents in the household.

<sup>2</sup> Persons with more than one type are shown under each type.

<sup>3</sup> The percentage of children receiving the full federal benefit rate, as shown in table 7, is less than those with no income, as shown here, due to the effect of parental deemed income in the payment computation.

Table 12.—Number and percentage distribution of children receiving federally administered SSI payments, by number of parents in the household, June 2000 <sup>1</sup>

Parents in household	Number	Percent
Total.....	846,670	100.0
No parent(s) <sup>2</sup> .....	114,980	13.6
One parent .....	524,190	61.9
Two parents .....	207,500	24.5

<sup>1</sup> The total of children with one or two parents in the household differs slightly from the number of children living in a parent's household in table 7. This is because table 7 represents only households where a parent is the head of the household, where this table includes children living with parents who are not head of the household.

<sup>2</sup> Children with no parent(s) in the household reside independently, with other relatives or non-relatives, or in institutions or foster care situations. Deeming does not apply in these situations.

Table 13.—Number and percentage distribution of children receiving federally administered SSI payments with one parent in the household, by type and monthly amount of parental income, June 2000

Monthly amount of parental income	Children with one parent		Mother only		Father only
